

Acqua & Sole S.r.l.

ASSOLOMBARDA

Filiera Energy Sustainable Global Chain

Acqua & Sole S.r.l., founded by Engineer Giuseppe Natta, son of the first and only Italian Nobel Prize winner in Chemistry, combines tradition with technological innovation and the application of circular economy principals. Each facility is designed to provide a service to the territory and, considering waste as a resource, is given a responsible growth of the territory itself.

Acqua & Sole S.r.l. mission is to safeguard and manage the environment we live in, with the awareness that we are guests in this world. The available resources are not ours but borrowed, and as such we must pass them on to the future generations in the best possible conditions.

Acqua & Sole S.r.l. has established a nutrient recovery facility in Vellezzo Bellini (PV) to recover materials from the food production and consumption cycle, with the principal scope of giving a service to the Territory. It recuperates from waste materials the necessary resources for the agricultural, civil and industrial activities. The Acqua & Sole facility indeed produces entirely renewable fertilizing matrices, electrical energy, thermal energy and biomethane primarily destined for the local territory, with the scope of creating a carbon-neutral district years ahead of the goals set by COP26.
