Product description

With a catalogue of solutions that already attracted the attention of some of the main players of the composite industry, GS4C aim is to penetrate the high-end composite market with innovative and sustainable solutions based on a circular economy business model. There is a growing need for sustainability for the composite sector, as well as solutions that would facilitate end-of-life recycling of composite elements. A number of companies have already been involved to cover all the aspects of the industrial process, from fiber manufacturing to recycling. GS4C works on the complete value chain to solve the technological obstacles to the adoption of new sustainable solutions.
