Who we are

Founded in 1974 with the aim of providing the market with highly specialized technical consultancy and assistance in the field of hydraulics, today we are established in Italy and worldwide as an engineering company able to design and build installations with unique innovative custom processes, ensuring high quality, passion, craftsmanship and attention to detail. Since its inception, Hydroservice has been a partner of Bosch-Rexroth, one of the world's leading companies.

Product description

- INDUSTRIAL

We are able to design and manufacture a wide range of hydraulic power units for the most different areas and sectors of application

-PETROCHEMICAL

For almost 40 years we have been world leaders in the engineering and construction of skids for polypropylene and polyethylene production plants.

Our units are suitable for installation inside petrochemical centres and include the entire automation system for the control of operating cycles.

-OIL & GAS

In the oil/gas field we are able to support the client in the design and manufacture of HPU to operate actuators for valves on pipelines for ESD, HIPPS, WHCP.

-ENERGY

Our hydraulic systems are used for hydroelectric equipment, for the production and distribution of gas and to regulate the diverters of combined cycle turbo-gas units.
