

NUVERA division of Hyster-Yale Italia

"Making Hydrogen make sense"

Who we are

Nuvera has been founded in 2000 with the scope of developing the technology of Hydrogen Fuel Cells. Since 2014 Nuvera is a part of Hyster-Yale's group, this has allowed Hyster-Yale to expand the offer of forklifts with the addition of those operating with Hydrogen Fuel Cell. Nuvera also continues with the development of other Fuel Cell products for the transport and the mobility: bus, big truck, delivery-van. Zero Emission is the challenge.

Nuvera works with OEMs and system integrators to design and manufacture zero-emission vehicles and equipment using Nuvera Fuel Cell Engines.

Compared with traditional diesel or natural gas buses, fuel cell-powered buses deliver substantial economic, operational, and environmental benefits.

The next generation of high-efficiency fuel cell power systems for forklift trucks allows a quickly and conveniently refueled, easily installed, and eliminating the need for battery handling, charging and swapping
