

Who we are

We are an Italian company with experience in various field of **engineering**. We design and manufacture **smart devices** equipped with **ultra-low-energy** telecommunication interfaces. We integrate our devices into existing infrastructures and make them available for activities related to management, **remote control**, scheduled maintenance, recording, **process optimization** and certification. The company's mission is to develop devices, platforms and **tailored solutions** for the realm of **IoT**.

IoT Device

Onyax designs and manufactures **intelligent sensors** which are able to meet any telemetry needs in the **IoT world** and **industry 4.0**.

IoT Device are typically applied in Smart City, Smart Building and distribution network for acquisition and monitoring of chemical-physical parameters.

Remote control platform

ACE (Acquisizione Controllo Ecosistema) is the first **platform** which includes all the components required to manage an **IoT telemetry network** by means of standard technologies available on the market.
