Product description

Healthcare improvement of the population through partnership agreements using advanced insoles for prevention

Podoactiva staff are experts in solving pathologies related to the feet or problems resulting from these, such as sports injuries, ailments due to improper foot strike, time-related problems, biomechanical issues of the back or knees or lower limbs, or child podiatry cases.

Health prevention service for target groups of any age by using customised insoles

Podoactiva Italia srl offers the most advanced customised insoles on the market based on one's biomechanical and anatomical parameters. They are designed using proprietary and patented technology employing Artificial Intelligence systems. They are highly effective for prevention and treatment of injuries, sport injuries, for children, senior citizens and everyday life.
