Special features

TObEUNIQUE digital printing

This is the only digital printing method in the world that involves the aluminum tube and the plastic cap in one printing process. A solution that allows new creative possibilities and enhance the unicity of the product. Used also as an anticounterfeiting method.

Soft Tip

The aluminum tube with soft tip is a great instrument used in the pharmaceutical and cosmetic fields. The addition of the soft plastic tip makes dispensing and application of the product very easy, even on the most sensitive parts of the body.

Smart AluminiumTube

The StealthCode®, an hidden code, invisible to human eye, can be printed all over the tube surface and is detectable with an appropriate mobile application. The scanning of the tube activates an online link to an official content. Each scan can be even be traced for marketing purposes
